Supplementary Fig. S1. Percentages of amino acid usage in *Elaphodus cephalophus* mitogenome. Each amino acid is represented by the one-letter abbreviation. Codon families are provided on the X-axis. Note that leucine (L1, L2) and serine (S1, S2) are each coded by two different genetic codons, and listed separately.

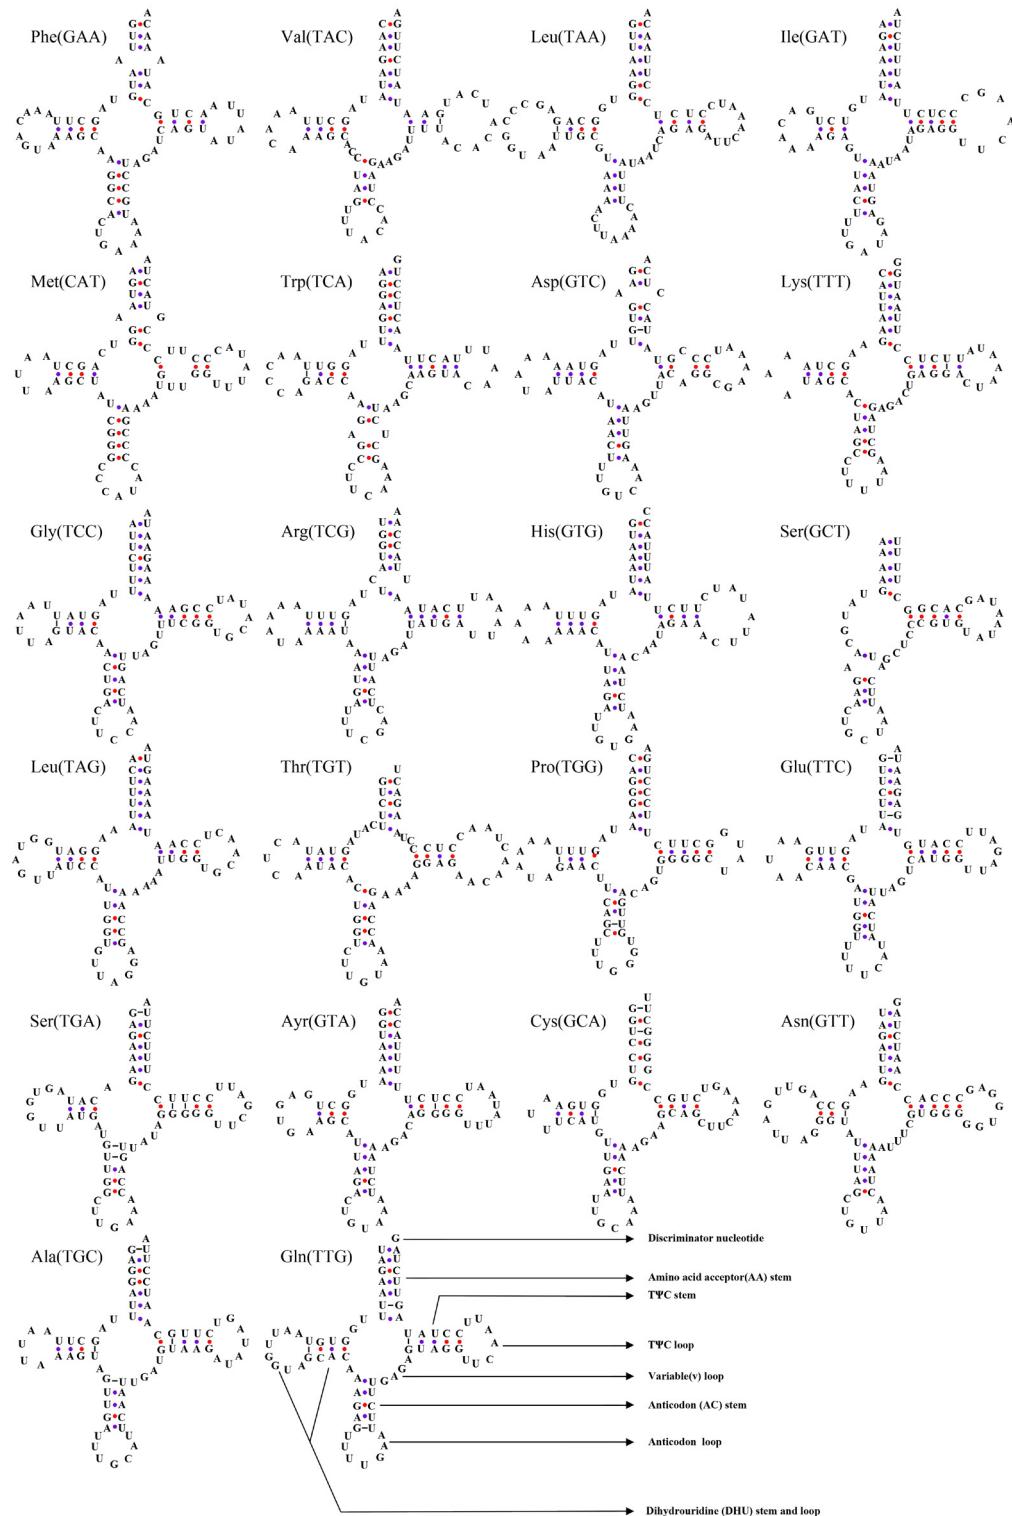

Supplementary Fig. S2. The relative synonymous codon usage (RSCU) in the mitogenome of *Elaphodus cephalophus*. Codon families are provided on the X-axis.

Supplementary Fig. S3. Inferred secondary structures for 22 tRNA genes of *Elaphodus cephalophorus*. 22 tRNA genes are labeled with the abbreviations of corresponding amino acids. A dot indicate Watson-Crick base pairing and dashes represents an unmatched base (G-U).

Supplementary Fig. S4. Alignment of the light strand replication origin (OL) between tRNA-Cys and tRNA-Asn of *Elaphodus cephalophorus* (A) and the putative stem-loop structure found in the OL region (B). The tRNAs are shown with white blocks whereas stem regions are shown in black blocks.

**Supplementary Table SI. Species mentioned in the present study with their GenBank accession number.**
